

How BDOI works, end to end

BDOI stands between BDO’s clients and the insurance market. It onboards and screens the client, quotes and places the risk with an insurer, books the policy and invoices the premium, collects it, keeps its commission and remits the net premium to the insurer, accounts for every peso, services the client, handles claims, and renews the cover before it expires. The sixteen signed-off process flows in HL_Process_Overview are the pieces; this page shows them as one machine.

Revenue	Commission on premium placed; RI commission as cedant
Clients	Bank-referred consumer accounts (CBG home, motor, fire), corporate, branches, retail, group employee benefits
Counterparties	Accredited insurers (SFTP-enrolled or email), reinsurers and RI brokers
Units	Marketing, TSU, Reinsurance, Processing, Cashiering, Collections, Disbursement, FRBS, Claims, Contact Centre, Compliance
Controls	Maker-checker everywhere money or cover changes; segregation of duties; audit trail

The whole chain on one picture

Read left to right. Each lane is a unit or counterparty; each column is a stage. Gold boxes are the client’s own steps. Dashed arrows are conditional branches: a non-packaged risk goes to TSU, a large risk to reinsurance, a claim is accepted only when the premium is paid.

The BDOIR end-to-end flow (connectors A-H in the source diagram) integrated with the New Business, TSU, Reinsurance, Operations, Collections, Disbursement, FRBS, ACSL, Refund, Claims, Case Management and Renewal flows. Renewal loops back into placement, so a policy that is cared for never leaves the chain.

— hand-off - - - conditional branch client's step

Where the money goes

A broker touches money four ways: it collects premium on the insurer's behalf, keeps its commission, remits the rest, and returns what is over-paid. Claims money never passes through BDOI; the insurer pays the assured or the repair shop directly.

Gross premium arrives through the cashiering channels and is applied to the invoice; the weekly remittance extract pays insurers the net premium through the disbursement chain. When a client pays the insurer directly, BDOI bills the insurer for its commission instead. Refunds go back to the client only through a Refund Request Form and the same disbursement chain. As cedant, BDOI remits reinsurance premium and collects reinsurance commission.

The life of one policy

The clocks the flows prescribe, laid on one line: how fast a booked premium must be collected, how long cover runs, and when renewal starts.

Collections start 10–15 days after booking and the credit term is 60 days; a commitment beyond it needs a credit-term extension. Claims are accepted only while the policy is in force and the premium is paid. The renewal master expiry list opens 140 days before expiry, with renewal advices at 70 and 45 days; an accepted renewal is placed and booked like new business.

Stage by stage

Twelve stages cover the chain. Each card names the units, what starts the stage, what happens, what it produces, the control that guards it, the clock, the source flows, and the BrokerVerse screen where it runs.

1

Onboarding & screening

Marketing Account Officer (MAO) · Compliance

Starts when A prospect walks in, a BDO branch or loan unit refers a client (CBG home / motor loans, CLPC), or a corporate account is prospected.

- Client created with KYC details and TIN
- Automatic sanctions and PEP screening; hit → Compliance clears or declines
- Risk score and tier set the customer due-diligence level

PRODUCES Client record (CLT-no.), screening result, CDD level

CONTROL No quotation without a screened client; declined clients cannot transact.

CLOCK Immediate

SOURCE FLOWS **NEW BUSINESS** **BDOIR E2E**

IN BROKERVERSE Sanction Screening & Risk · [step-by-step](#)

Sanction Screening & Risk

2

Quotation & proposal

MAO · Marketing TL · TSU (non-packaged) · Reinsurance

Starts when Screened client requests cover, or a renewal/conversion opportunity is opened.

- Packaged product: rating engine prices premium, VAT, DST, LGT, FST and commission from the product table
- Non-packaged risk: TSU request → completeness and duplicate check → quotation slip → TL approval → RI referral if needed → sent to insurers → responses with evidence → comparative table → proposal slip approved
- Proposal emailed; client accepts or declines with reason; hold cover can be requested from the insurer

PRODUCES Quotation (QT-no.), proposal, TSU proposal slip, hold-cover request

CONTROL Non-packaged products cannot be quoted without an approved TSU proposal; acceptance limits and survey threshold checked at quotation.

CLOCK TSU SLA escalation on breach; insurer follow-up until all quotes are in

SOURCE FLOWS **NEW BUSINESS** **PRODUCT MAINTENANCE TSU** **RENISURANCE**

New Business > Quotations & proposals · Product Maintenance > TSU requests

3

Placement with the insurer

Processing Team / Officer (PT/PO) · Insurer

Starts when Client acceptance recorded.

- Policy shell created in status placement requested
- Placement slip sent by SFTP when the insurer is enrolled, otherwise by email
- Insurer returns (reason routed to marketing, resubmitted) or places the risk and issues the policy

PRODUCES Policy (POL-no.), placement slip, insurer policy reference

CONTROL Channel decided by the insurer record; returns carry a reason and can be resubmitted.

CLOCK Facultative RI: acknowledge within 24 hours, slip within 3 working days

SOURCE FLOWS **NEW BUSINESS** **RENISURANCE**

New Business > Placement · Reinsurance > Facultative placements

4

Booking, invoicing & e-policy

PO (maker) · Underwriting Head (checker) · COG-OPRM · Contact centre

Starts when Risk placed and e-policy received.

- Book & invoice raises a policy_issue approval; the checker approves
- On approval: policy in force, invoice (premium receivable) generated, booking journal posted
- E-policy delivered to the client via COG (SFTP) or PO email; fall-outs go to the contact centre with the exception reason

PRODUCES Invoice (INV-no.), booking journal, e-policy, exception report

CONTROL Maker-checker with segregation of duties; only in-force, renewed or expired policies can carry claims.

CLOCK Same day once placed

5

Cashiering & payment application

Cashiering Team · UPP handler · Marketing (direct payments)

Starts when Client pays: bills payment, OTC cash or cheque, CLPC / PMS / trade batch files, direct credit, autopay, or directly to the insurer.

- Payment applied to the invoice; official receipt issued; cash and premium journals posted
- Post-dated / OTC cheques held 4 days, then matured and applied, or tagged bounced (exclusion list)
- Zero-PR or excess payments become unapplied premium (GL 2400) until matched
- Direct payment to insurer: commission receivable (GL 1250) identified → billed → approved → collected with a commission OR

PRODUCES Official receipt (OR-no.), PDC register, unapplied list, commission billing

CONTROL Cheques cannot mature before the clearing date; unapplied premium never sits against an invoice.

CLOCK 4-day cheque hold

SOURCE FLOWS OPERATIONS BDOIR E2E

Operations > Invoices & cashiering · Payments / PDC / UPP · Direct payments

6

Marketing collections

Collection Handler · MAO · Unit / Finance Head

Starts when Invoice unpaid after booking.

- PR list by market segment with ageing and stage: newly booked → within credit term → committed → overdue → escalate
- Marketing diary records when, where, how and what of every effort; SOA and reminders sent
- Commitment beyond the 60-day credit term emails the MAO; a credit-term extension (CTE) needs Unit Head approval

PRODUCES Statement of account, effort diary, CTE request

CONTROL Collect within 10–15 days of booking; CTE extends the due date only after approval.

CLOCK 60-day credit term

SOURCE FLOWS **MARKETING COLLECTIONS**

IN BROKERVERSE Collections · [step-by-step](#)

Collections

7

Remittance & disbursement

Operations (extract) · Disbursement DPO → DTL → DSH → DUH · Insurer

Starts when Applied payments accumulate; weekly cycle (Monday to Friday coverage).

- Weekly remittance extract per insurer, sanitised (direct-paid and already-remitted policies excluded, endorsements and knock-offs removed)
- Submission creates a disbursement voucher; reviewer, section head and unit head sign in sequence
- Payment posted with cheque or transaction reference; confirmation email to the requestor; GL batch posted
- The same chain pays refunds, suppliers, reimbursements and cash advances

PRODUCES Remittance schedule, disbursement voucher, payment journal, confirmation email

CONTROL Requester, reviewer, approver and payer are different people; nothing is paid without the approval chain.

CLOCK Weekly extract; end-of-day processing

SOURCE FLOWS **OPERATIONS** **DISBURSEMENT**

Accounting & Disbursement › Remittances · Disbursements

FRBS ledger & reconciliation

FRBS Accounting Assistant · TL · Team Head · Accounting Processor (ACSL)

Starts when Every transaction above posts a journal automatically; month and year ends.

- Chart of accounts maintained; system journals for booking, receipts, commissions, remittances and refunds
- Manual journals drafted, reviewed by the TL and posted by the FRBS approver
- ACSL: insurer statement of account reconciled with the subsidiary ledger; abnormal balances raise adjustment entries
- Period close and reopen; fiscal-year close moves nominal balances to retained earnings; trial balance and financial reports

PRODUCES Journals, trial balance, financial reports, SOA reconciliation runs

CONTROL Double-entry ledger; closed periods reject postings; only the Finance Head reopens a period.

CLOCK Monthly on an agreed date; year-end

SOURCE FLOWS **FRBS - ACCOUNTING** **ACSL**

IN BROKERVERSE Accounting & Disbursement > Journals · Trial balance · Periods & year-end · ACSL / SOA recon · [step-by-step](#)

Accounting & Disbursement > Journals · Trial balance · Periods & year-end · ACSL / SOA recon

Adjustments, cancellations & refunds

Adjustment Team · Operations checker-poster · MAO · Marketing TL · Unit Head

Starts when Client requests a change or cancellation; production register shows a discrepancy; unapplied premium to be returned.

- Endorsement (adjustment or cancellation) validated and posted under checker-poster; premium delta journaled; cancellation sets the policy cancelled
- Production reconciliation classifies insurer register rows as matched, with discrepancies or unbooked, each dispositioned
- Refund Request Form raised from the endorsement or UPP → Marketing TL review → Unit Head sign-off → refund disbursement voucher

PRODUCES Endorsement (END-no.), production recon run, RRF and refund voucher

CONTROL Refunds only originate from endorsements or unapplied premium and are paid only through the disbursement chain.

CLOCK Per disbursement chain

SOURCE FLOWS **OPERATIONS** **REFUND REQUEST** **BDOIR E2E**

Operations > Adjustments · Production recon · Accounting & Disbursement > Refund requests

10

Claims

Claim handler · Insurer / adjuster · Assured · Casa / dealer

Starts when Client, account officer or branch sends notice of loss.

- Claims Acceptance Control checks the policy is in force and premium paid; Preliminary Loss Advice sent
- Document checklist by line (motor; non-motor via Claims Reporting Form); Formal Loss Advice to the insurer once complete; adjuster flagged
- Insurer evaluates and offers; assured accepts or contests (re-evaluation loop, more documents may be requested)
- Settlement by Letter of Authority to the preferred casa/dealer or by cash cheque; settlement approved; claim tagged settled and closed, or declined with reason

PRODUCES PLA, FLA, offer, LOA, settlement

CONTROL FLA blocked until documents complete; settlement is maker-checker; every stage has a declination exit.

CLOCK Age in days tracked per claim

Claims

11

Customer servicing & case management

BDO Contact Centre (CCC) · BDO Insure agent · Fulfilment units

Starts when Customer contacts the contact centre by phone, email or digital channel.

- General inquiry handled and closed at point of contact
- Account-related concern: positive identification (registered TIN or email) then handled at point of contact or referred to the owning unit with a TAT
- Fulfilment unit resolves and closes; mis-routed cases returned to the CCC with a reason and re-logged
- Servicing facility: search by invoice, policy or name; view accounts; update contact details

PRODUCES Case (SR-no.), TAT, contact update

CONTROL Failed PID blocks the case; past-TAT cases are flagged on the dashboard.

CLOCK Per category (hours)

12

Renewal (automated RMEL)

Sanitation Handler · Marketing TL / Team Head · PO · Insurer

Starts when Policy enters the 140-day window before expiry.

- Renewal Master Expiry List generated; sanitation dispositions each account: for renewal, remarket, or not for renewal (NRNS letter)
- Renewal advice letters: initial at –70 days, final at –45 days
- Client accepts: renewal policy created and enters placement → booking → e-policy like new business
- Bank-submitted policies feed the sanitation handler 150 days from expiry (conversion opportunity)

PRODUCES RMEL, RA letters, NRNS letter, renewal policy**CONTROL** RA timings and order enforced; conversion proceeds through New Business.**CLOCK** –140 / –70 / –45 days**SOURCE
FLOWS** **RENEWAL** Submitted Policies**IN
BROKERVERSE** Renewal · Submitted Policies > Expiring (150 days) · [step-by-step](#)

Renewal · Submitted Policies > Expiring (150 days)

Satellite processes and where they plug in

Four flows run beside the main chain and feed it at specific stages.

Facultative reinsurance

Feeds stage 2–3 for large or special risks referred by TSU: request → acknowledge (24 h) → underwriting information loop → slip with reinsurers, security rating and signed-slip evidence (3 working days) → closing and debit note to the cedant. RI commission is monitored with the Commission Receivable Unit.

RENISURANCE · [step-by-step](#)**Employee benefits**

A parallel new-business and renewal track for group schemes: renewal advice → Broker of Record → Terms of Reference with master list and utilisation released to insurers → comparative analysis (premium, benefits, capabilities) → client confirmation and award, with ISACOM approval for a non-accredited provider → handoff to processing and collections (stages 4–6).

Submitted policies

Policies the client bought elsewhere and submitted to the bank for its loan: masterlist validated, matched and consolidated; adequacy reviewed; findings issue an Insurance Adequacy Assessment Form; accounts 150 days from expiry go to the sanitation handler as renewal or conversion opportunities (stage 12).

Submitted Policies · [step-by-step](#)**Product maintenance**

Keeps stage 2 honest: package creation or change requests are validated, approved under maker-checker and published as a release advisory to Marketing, Operations and TSU; the insurer panel records accreditation (drives ISACOM) and SFTP enrolment (drives the placement channel).

PRODUCT MAINTENANCE TSU · [step-by-step](#)

How the processes hand off to each other

The integration points. Each is a document or a state that one process writes and the next one reads.

Onboarding → Quotation

Only a screened client can be quoted; the client number carries into every later document.

Quotation → TSU → Reinsurance

Non-packaged risks leave New Business for a TSU quotation slip; large or special risks are referred to RI before quoting; the approved proposal slip returns to New Business.

Placement → Booking → Cashiering

Placement creates the policy; the checker's approval creates the invoice; cashiering works only from invoices.

Cashiering → Collections

Unpaid invoices become the PR list; applied payments leave it. Beyond-term commitments raise a CTE for the Finance Head.

Cashiering → Remittance → Disbursement → Insurer

Applied premium is extracted weekly, sanitised and paid to insurers through the four-signature chain; direct-paid policies are excluded.

Endorsement → Refund → Disbursement

A cancellation or adjustment with a refund raises an RRF; TL review and Unit Head sign-off create the refund voucher.

Everything → FRBS ledger

Booking, receipts, commissions, remittances, refunds and settlements post journals automatically; manual entries and ACSL adjustments post only after review and approval.

Collections → Claims

Claims Acceptance Control reads the invoice balance: an unpaid premium blocks registration.

Booking → Renewal → Placement

In-force policies enter the RMEL 140 days before expiry; an accepted renewal re-enters placement and booking.

Submitted policies → Renewal

Adequacy-reviewed bank-submitted policies feed the sanitation handler 150 days before expiry.

Contact centre → Fulfilment units

Account-related cases are routed to the unit that owns the account; returns go back to the CCC for re-logging.

Product maintenance → New Business / TSU

Release advisories tell Marketing, Operations and TSU what changed in a package and from when.

Controls and clocks

Who makes and who checks, and the turnaround times the flows commit to.

DECISION	MAKER	CHECKER / APPROVER	APPROVAL TYPE
Policy booking	PO / MAO	Underwriting Head	policy_issue
Product change	Product admin	Underwriting Head	product_change
